To: Larry Drive Residents

From: Mark Bland, Wastewater Manager

Date: March 14, 2017

Madison Utilities (“MU”) will soon begin a major rehabilitation project to repair some of the underground sanitary sewer lines. The purpose of this letter is to inform all residents of MU’s work ahead of time.

The sanitary sewer lines in Larry Drive, Larry Place and Larry Cir were installed in the 1970’s and some of these underground lines have decayed over time. MU will repair these lines so as to hopefully prevent a more serious failure in the future.

The sanitary sewer main is generally located in the middle of the street and is typically 5 to 10 feet below the surface.

**If you reside or travel on Larry Dr., Larry Pl., and Larry Cir. . you will be directly impacted by this project.**

M U has televised the interior of all the lines in the Hughes Heights area, and has determined that all of the clay mains are in need of replacement.

The existing pipe will have a plastic liner installed inside the pipe. This method is known as pipe bursting. This method of repair is commonly used, and minimizes the amount of excavation needed to gain access to the pipe.

MU will be excavating each manhole and replacing it with a new one. Each homes service will be replaced from the main to the edge of the pavement.

The work will commence beginning the week of March 20, and is estimated to be completed within 30 days, weather permitting.

Once MU has completed its work the City of Madison will repave the road.

If you have any questions or concerns please do not hesitate to call or email me.
